

A priority queue for a simplified agenda manager in a rule-based expert system shell

By Naimisha Manikonda

1.Objective:

To implement a simplified agenda manager for a priority queue system .The agenda manager takes a file name as input from user and should read the contents of the file line by line. Each line of the file is a list of ordered pairs (x, y) where x is a rule and y is a priority.An agenda manager should determine the rule with highest priority execute it and remove it from the list.

2.Program Description

Read from file:

The program takes the input from the user who specifies the path of the file from which the data should be read from.If the file is in the specified location it reads the input from it if not displays an error message saying that the file is not found and abruptly terminates.

Buildheap:

This method is called after reading line from the input file then after parsing the input to get a in value for priority and rule name,it builds a heap.

Heapify :

This method is used by the build heap method to maintain the heap property with the root node having the largest value

Heap_extract_max:

Returns the rule with the highest priority if the heap is not empty

Insert:

Adds a new rule name and its priority value to the queue

Heap_remove:

After the rule with max priority is executed this method removes the rule from the queue and reduces the size of the heap

Note:This program runs until 30 cycles

3.Steps to Run the program:

- Extract the zip folder and open the program Agendamanager.java in ide like net beans on eclipse Click run
- When asked to enter the path of the file which has the rules to be read enter its absolute path

```
run:
enter the name of the path of the file
C:\Users\naimi\Desktop\agendamanager\test\test1.txt
```

- After entering path press enter to see the results of the rules executed in the agenda manager according to priority

```
Output X
agendamanager (run) #3 x agendamanager (run) #4 x agendamanager (run) #5 x Debugger Console x agendamanager (run) #6 x
run:
enter the path of the file which has the rules
C:\Users\naimi\Desktop\agendamanager\test\test1.txt
